Application of AI

1. AI in Navigation:-

- provide users with accurate, timely, and detailed information to improve safety.
- Convolutional Neural Network and Graph Neural Network,
- automatically detecting the number of lanes and road operational efficiency,analyze road tr routes.

2. AI in Robotics:-

Robots powered by AI use real-time updates to sense obstacles in its path and pre- instantly.

It can be used for -

- Carrying goods in hospitals, factories, and warehouses
- Cleaning offices and large equipment
- Inventory management

2. AI in Healthcare

- build sophisticated machines that can detect diseases and identify cancer cells.
- help in analyze chronic conditions with lab and other medical data to ensure early d
- AI uses the combination of historical data and medical intelligence for the discovery of ne

3. AI in Automobiles :-

- build self-driving vehicles.
- vehicle's camera, radar, cloud services, GPS, and control signals to operate the vehicle.
- emergency braking, blind-spot monitoring, and driver-assist steering.

4.AI in Social Media :-

- :- **Instagram -**determine what posts you are shown on your explore tab.
- :- **Facebook -** Facebook can understand conversations better.
  translate posts from different languages automatically.
- :-**Twitter -** fraud detection, removing propaganda, and hateful content.
  recommend tweets that users might enjoy,

Disadv

of AI

1. High Costs of Creation:

- Updating every day the hardware and software to meet the latest requirements.
- Machines's repairing and maintenance , requires huge costs to build complex machines.

2. Making Humans Lazy:

- automating the majority of the work.
- Humans tend to get addicted to these inventions which can cause a problem to future ge

3. Unemployment:

- The majority of the repetitive tasks and other works with robots,
- human interference is becoming less which will cause a major problem in the employme
- Every organization is looking AI robots which can do similar work with more efficiency.

4. No Emotions:-

- machines cannot replace the human connection that makes the team.
- Machines cannot develop a bond with humans

5. Lacking Out of Box Thinking:-

- Machines can do only designed or programmed task,
- irrelevant outputs which could be a major backdrop.
